MODEL

WEIGHT

The reference weight was based on size 42

Weight is not provided for soles with single sizing.

Since the origins of humanity, every new adventure has begun with a first step. At Andes Generation, our mission is to be the reliable support that accompanies you on every path, giving you the confidence to fully enjoy each experience and emotion.

Our #GenteAndes lives with passion, knowing that what matters most is moving forward with confidence and having the best support beneath their feet. That’s why our technologies are designed to turn every step into an opportunity to overcome challenges and conquer new horizons.

Would you like to discover them? These technologies have been developed and tested in collaboration with professionals and passionate users, ensuring performance that meets the demands of your everyday challenges

OUR TECHNOLOGIES

AQUAGRIP® ADHERENCE

Advanced rubber compound offering superior grip on wet surfaces. Developed with cutting-edge techniques, it maintains its traction capabilities even in direct contact with water, ensuring secure footing in humid environments. This technology is integrated into products with innovative drainage designs, minimizing the risk of aquaplaning and maximizing performance in extreme conditions.

ONEGRIP® TECHNOLOGY

OneGrip is our rubber technology designed to deliver flexibility, grip, and durability in every step. Through our research and development efforts, we have created a compound that adapts to various terrains, giving you the confidence and support you need to move forward without limits.

COMFORTGRIP

OUR TECHNOLOGIES

This compound transforms the internal structure of rubber, resulting in a lighter, more flexible, durable, and comfortable material. Its main advantage is comfort, as it reduces joint and foot pain by absorbing biomechanical impact with every step.
Its anti-slip properties also ensure safety in every movement. Thanks to its comprehensive functionality, it is ideal for everyday footwear and orthopedic applications, prioritizing user health, well-being, and confidence.

FOOTLITE

Advanced EVA technology, specifically designed for soles that prioritize comfort and functionality. This material combines exceptional lightness, flexibility, and reliable mechanical properties, offering a strong foundation for everyday use.
Its balance between durability and adaptability makes it an ideal choice for products focused on orthopedics and well-being.

DEEPGRIP

DEEPGRIP is a compound created exclusively for canyoning, offering unmatched grip on wet or even submerged rock surfaces. Deepgrip has been tested by top professionals, resulting in a rubber that ranks among the highest-performing soles for aquatic activities.
